

ROE School Bus Drivers Database

Information Sheet

The ROE School Bus Drivers Database from Smolinski Consulting enables you to easily track all drivers within your county, their employer and their training.

For training courses you can track what courses you are currently offering including dates, time, and instructor and whether the course is an initial or refresher training. When you enter the Drivers License number, the system will automatically look up that driver and insert their information into that course. Before the course is run you can print a roster for your instructor. When it is completed, you can update the driver database with their new course information (including adding new drivers) and update the fees due from the employers with one click of a button. Then you can print completion certificates and even print labels for the employers of the drivers in that course to mail those certificates.

You can print listings of all drivers by employer – either for all employers – or only those you choose. In the same manner you can print employer address labels for all or those selected.

The system is written in and requires Microsoft Windows 98 or later and Microsoft Access (version 2000 or later). But this enables you to use the power of Access to write your own

queries, reports and even to use the database in Microsoft Word mail merges.

The cost of the system is \$1250. This includes minor customizations for your ROE. Additional customization and/or training can be arranged. For ROE's within 100 miles of Chicago this includes onsite installation and two hours of training. Installation and training via Symantec's PC Anywhere (not included in cost) is included for ROE's that are further distance (although onsite installation and training can be arranged for additional cost).

For more information call Mary Ellen Smolinski at 815-469-0910. Or email her at Maryellen@smolinsiconsulting.com. She will be happy to arrange a demonstration.
